

**TECHNICAL SPECIFICATION:**

- Wireless communication with TECH controllers
- WiFi 802.11 b / g / n technology
- Range up to 100 m
- Communication protocol - RS-232
- Cooperation with any computer / tablet / phone with WiFi available
- Cooperation with the application MyGAS

TECHConnect Communication Module

TYPE: Wireless Communication Module**MODEL:** TECHConnect

TECHConnect is a communication module for the TECH controllers made by LPGTECH. It uses the wireless network Wi-Fi in the 2.4 GHz bandwidth, in order to connect with the devices. The communication module is currently working with the MyGAS app, which is available for iPhone (4s, 5, 5s, 6, 6 plus, 6s, 6s plus, 7, 7 plus) by Apple. The app is available for free in the AppStore. TECHConnect connects to the diagnostic interface controller TECH, as well as the other communication interfaces (BlueTECH, OptoTECH).

TECHConnect module offers two connection modes:

- Connection to the module as an access point (where the lack of access to the internet is a restriction);
- Connecting via an access point (where there isn't a restriction in an access to the internet);

INSTALLATION INSTRUCTION:

TECHConnect should be connected to the controller's diagnostic plug and placed in a way that will prevent it from displacement or damage by the engine cover.
